

# ENVIRONMENTALLY RESPONSIBLE WATER SERVICES

## DRINKING WATER

The Meridian Metropolitan District delivers second-to-none crystal-clear drinking water for our customers. Water that meets and exceeds every level of quality and health standards. This doesn't happen by accident. Our commitment to you is fortified by the most experienced, competent personnel working daily to produce the most important commodity in your life: pure, clean water.

## WASTEWATER TREATMENT

Wastewater treatment takes on a whole new meaning at the Meridian Metropolitan District. After our wastewater has been treated (and is cleaned), it is returned back to Meridian Metro District Irrigation system. This design insures that not only is our wastewater treated to the highest quality standards, it is then used to water parks, golf courses, and other outdoor landscaping. As a result, we recycle 100% of our water. This represents a nationally recognized sustainable conservation strategy.

## IRRIGATION

The Meridian Metropolitan District provides irrigation services for a variety of purposes within its service area. This system is considered highly efficient and sustainable in its design. The irrigation system utilizes the District's wastewater as its main source of water. Treated water leaves the wastewater plant, is held in a 486 acre-foot reservoir, and is then recycled directly into the irrigation supply lines to water parks, golf courses, commercial properties, and other common areas. This environmentally responsible recycle strategy provides a sustainable source of irrigation water for Meridian Metropolitan District and is the backbone of our conservation strategy.
